

REMOTE PROGRAMMING AND DIAGNOSTICS PACKAGE (RAPID)

Features

- *Windows®-Based*
- *Off-Line Programmable*
- *Remote Programming via Modem*
- *Intuitive Graphical User Interface (GUI)*

General Description

The Dukane Model 437-00120 Remote Programming and Diagnostics (RAPID) software allows configuration of system operational parameters using a PC.

The program has an intuitive Windows-based graphical user interface. All system programming can be done off-line and saved to a DOS file. The RAPID software program requires an IBM or compatible PC running on Windows 3.1 or higher. System configuration and diagnostics can also be accomplished from a remote PC via modem. Both the local (PC) and remote modems must be Hayes compatible.

For added system monitoring, the Dukane Model 437-00144 Monitoring and Diagnostic Software (MDS) is available. The MDS includes the functionality of RAPID plus five new system monitoring features.

Associated Equipment

IBM PC or compatible
Personal computer

Windows 3.1 or higher
PC software

Model 77A100
Modem Kit

Associated Software

437-00144
Monitoring and Diagnostic Software (MDS)
