ProCare 6000

Smart Choice

Smart choice

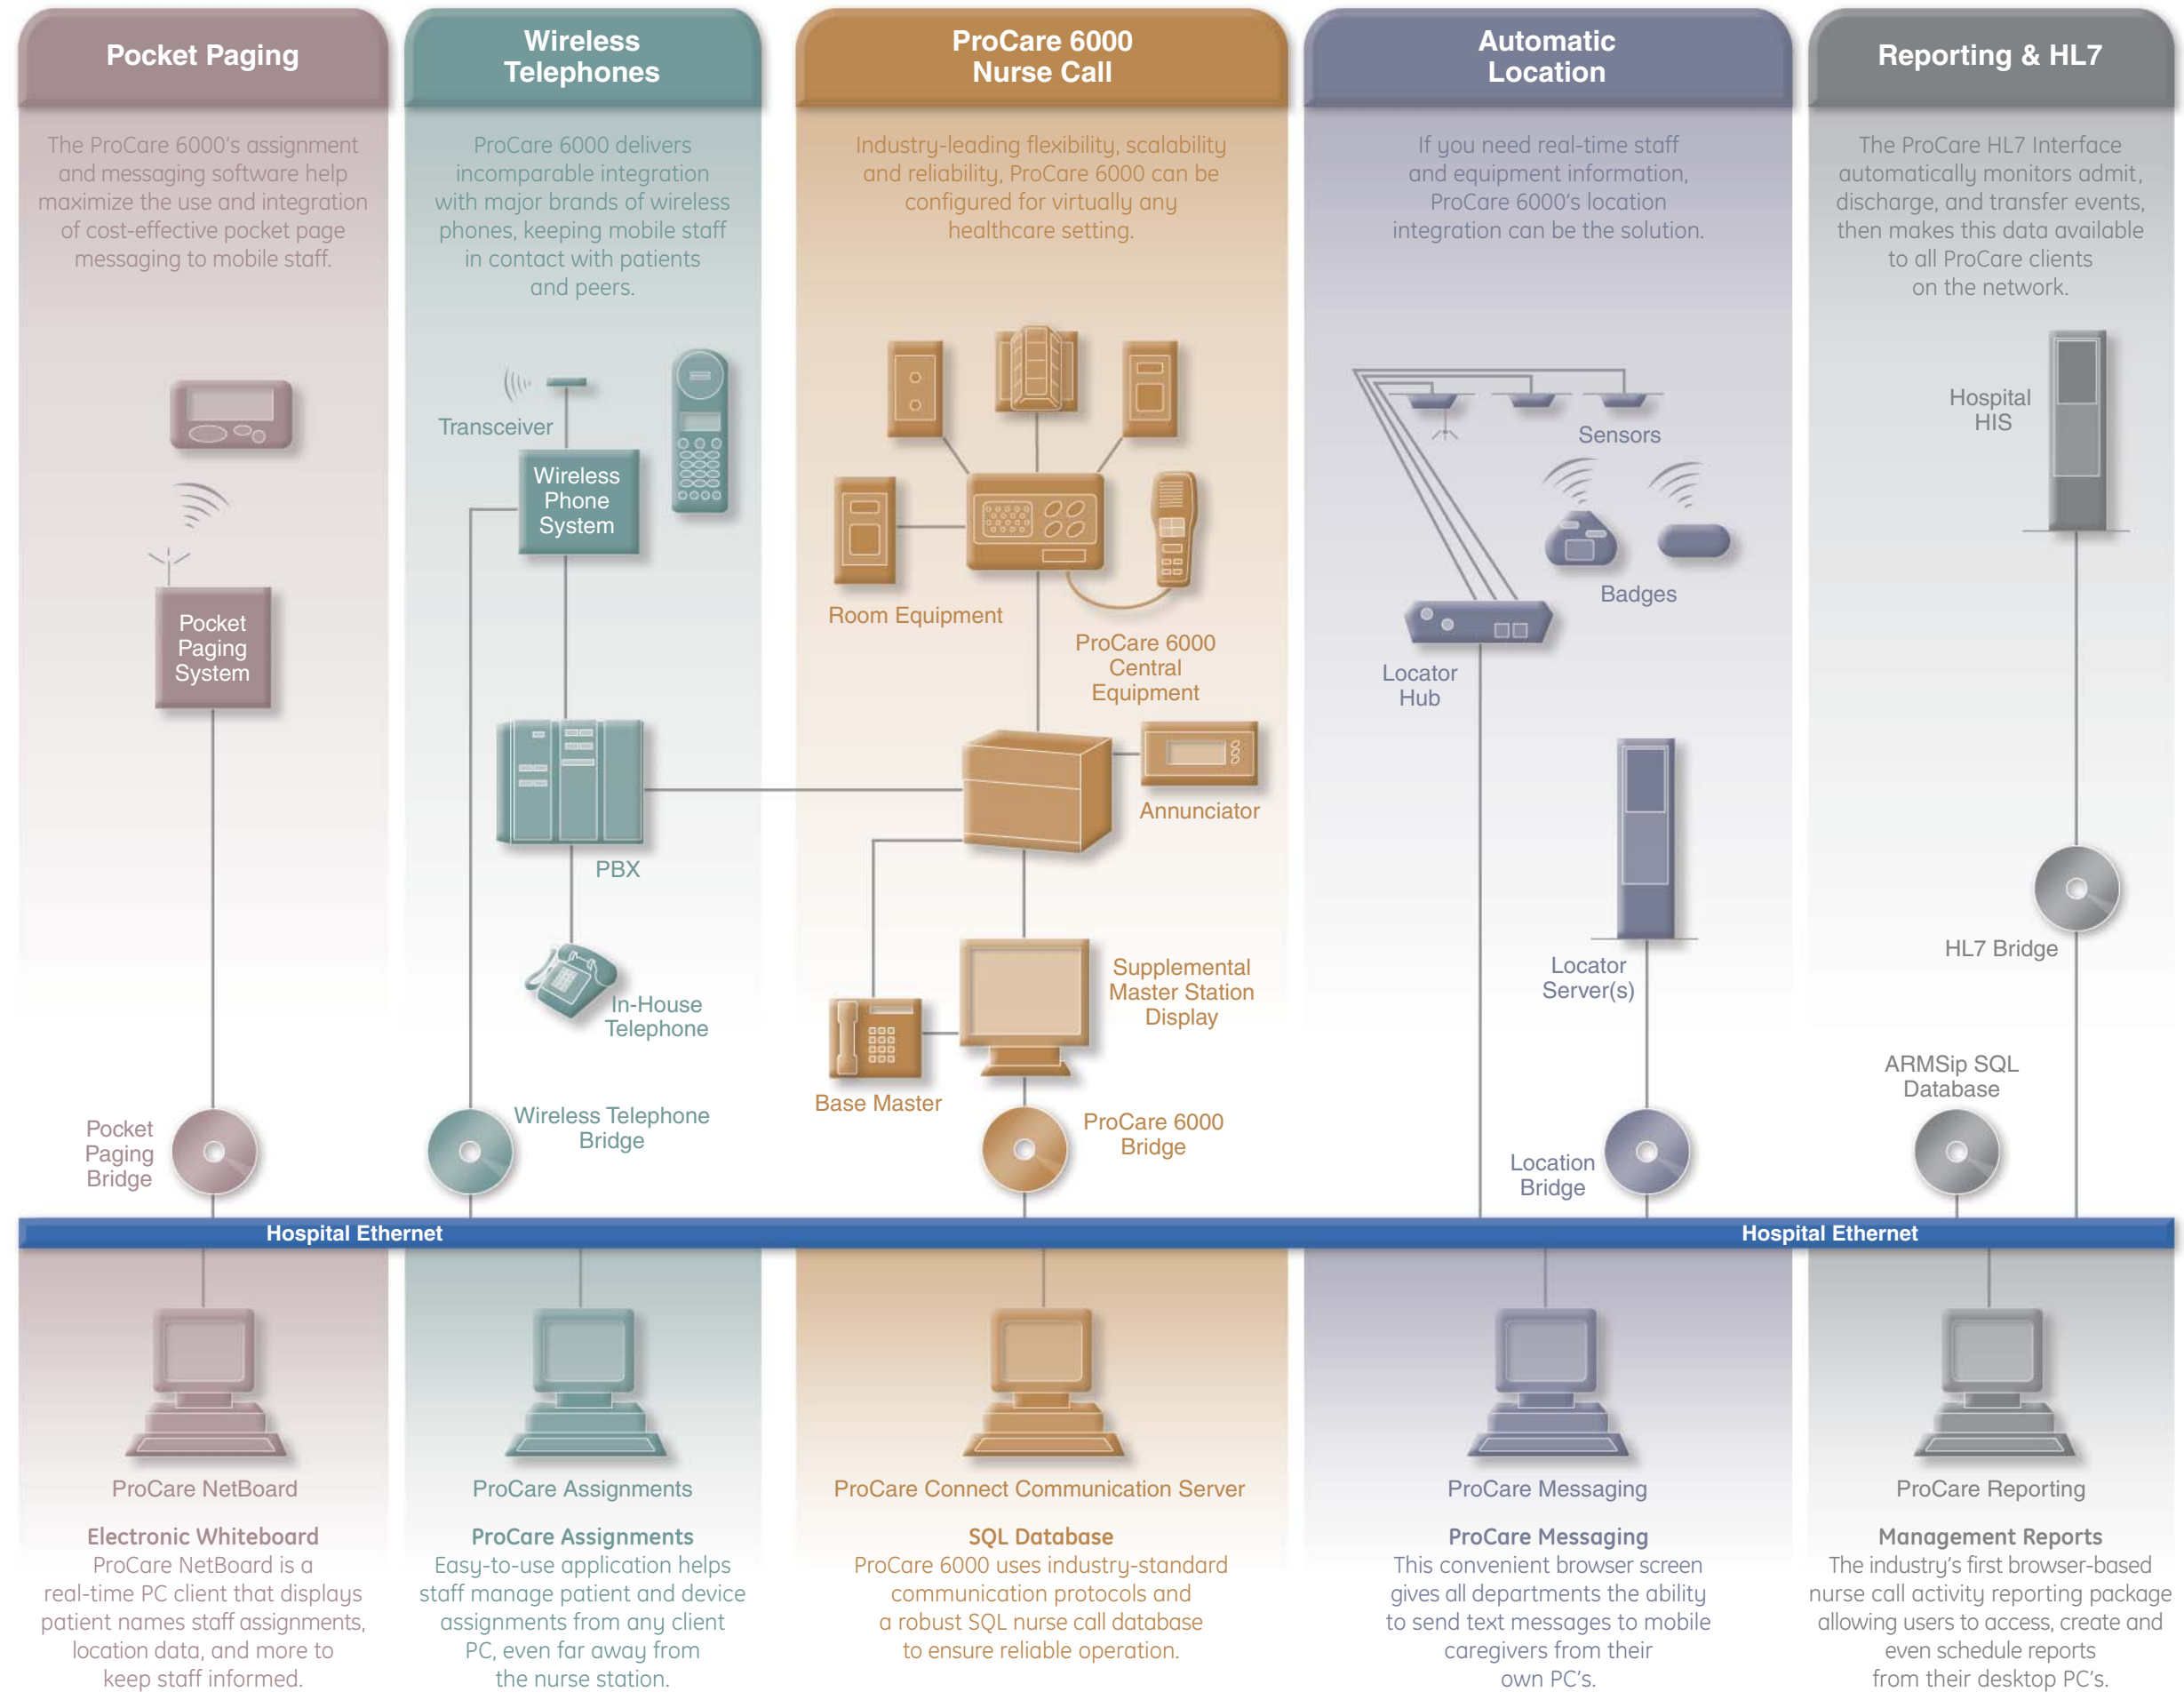

Healthcare professionals are pulled in so many different directions and time is always short. In fact, sometimes it may seem like bedside patient care is forced to take a back seat to documentation, reports, and administrative responsibilities.

GE Security can't really shorten your to-do list or add hours to your day, but we can put smart communication systems in place to help you manage your tasks and time more efficiently.

Dukane Communication Systems, now part of GE Security, engineered the ProCare 6000 to make smart decisions so you don't have to. It puts you in control! You'll be able to manage patient calls and other events to match your specific patient care model. You can even decide who should receive certain types of calls on wireless devices using ProCare Assignments and ProCare Messaging. These advanced tools will allow you to spend more time at the patient bedside, offering the quick responses that your patients deserve.

ProCare 6000 offers smart, scalable integrations with pocket pagers, wireless telephones, automatic location, and HL7 to deliver the system capabilities that the healthcare industry has demanded. When these integrations are coupled with intuitive software clients like ProCare Assignments, browser-based wireless Messaging, NetBoard Electronic Whiteboard, and browser-based Management Reporting, you'll be deploying an enterprise-wide communication platform that will serve your facility reliably for years to come – and with the support of GE Security.

The ProCare 6000 from GE Security – it's the smart choice!

Pocket Paging

The ProCare 6000's assignment and messaging software help maximize the use and integration of cost-effective pocket page messaging to mobile staff.

Diagram: Pocket Paging System, Pocket Paging Bridge, Hospital Ethernet, ProCare NetBoard.

ProCare NetBoard

Electronic Whiteboard
ProCare NetBoard is a real-time PC client that displays patient names staff assignments, location data, and more to keep staff informed.

Wireless Telephones

ProCare 6000 delivers incomparable integration with major brands of wireless phones, keeping mobile staff in contact with patients and peers.

ProCare Assignments

ProCare Assignments
Easy-to-use application helps staff manage patient and device assignments from any client PC, even far away from the nurse station.

ProCare 6000 Nurse Call

Industry-leading flexibility, scalability and reliability, ProCare 6000 can be configured for virtually any healthcare setting.

ProCare Connect Communication Server

SQL Database
ProCare 6000 uses industry-standard communication protocols and a robust SQL nurse call database to ensure reliable operation.

Automatic Location

If you need real-time staff and equipment information, ProCare 6000's location integration can be the solution.

Diagram: Sensors, Badges, Locator Hub, Locator Server(s), Location Bridge, Hospital Ethernet, ProCare Messaging.

ProCare Messaging

ProCare Messaging
This convenient browser screen gives all departments the ability to send text messages to mobile caregivers from their own PC's.

Reporting & HL7

The ProCare HL7 Interface automatically monitors admit, discharge, and transfer events, then makes this data available to all ProCare clients on the network.

Diagram: Hospital HIS, HL7 Bridge, ARMSip SQL Database, Hospital Ethernet, ProCare Reporting.

ProCare Reporting

Management Reports
The industry's first browser-based nurse call activity reporting package allowing users to access, create and even schedule reports from their desktop PC's.
